Term Project - Deliverable 2

(Dhiraj Pakhrin and Satkrit Bhattarai)

- One seller can sell multiple products, but one product is associated with only one seller.

- One product can have multiple inventory records, but each inventory record corresponds to only one product.

- One consumer can place multiple orders, but only one consumer places each order.

- One order can contain multiple products, and each product can be present in multiple orders.

- One order can have one shipment, and one shipment is associated with one order.

- One shipment originates from one Amazon warehouse, and one Amazon warehouse can have multiple shipments.
